Job Description	

We're on the lookout for the curious, those who think big and want to define the world of tomorrow. At Amazon, you will grow into the high impact, visionary person you know you're ready to be. Every day will be filled with exciting new challenges, developing new skills, and achieving personal growth. How often can you say that your work changes the world? At Amazon, you'll say it often. Join us and define tomorrow.

At Amazon, we hire the best minds in technology to innovate and build on behalf of our customers. The intense focus we have on our customers is why we are one of the world's most beloved brands - customer obsession is part of our company DNA. Our interns write real software and collaborate with experienced software development engineers (SDEs) who guide interns on projects that matter to our customers.

Key job responsibilities

- Design, implement and deliver state-of-the-art distributed, high-performance data and transaction management processing algorithms and solutions.
- Deploy and monitor new features in a highly available and fault tolerant system running in the cloud.

A day in the life

As an intern, you will be matched to a manager and a mentor. You will have the opportunity to influence the evolution of Amazon technology and lead mission critical projects early in your career. Your design, code, and raw smarts will contribute to solving some of the most complex technical challenges in the areas of distributed systems, data mining, automation, optimization, scalability, and security - just to name a few.

In addition to working on an impactful project, you will have the opportunity to engage with Amazonians for both personal and professional development, expand your network, and participate in activities with other interns throughout your internship. No matter the location of your internship, we give you the tools to own your project and learn in a real-world setting. Many of our technologies overlap, and you would be hard pressed to find a team that is not using Amazon Web Services (AWS), touching the

catalogue, or iterating services to better personalize for customers. We make the impossible, possible.

Amazon is committed to a diverse and inclusive workplace. Amazon is an equal opportunity employer and does not discriminate on the basis of race, national origin, gender, gender identity, sexual orientation, disability, age, or other legally protected status.

Our inclusive culture empowers Amazonians to deliver the best results for our customers. If you have a disability and need a workplace accommodation or adjustment during the application and hiring process, including support for the interview or onboarding process, please visit <https://amazon.jobs/content/en/how-we-hire/accommodations> for more information. If the country/region you're applying in isn't listed, please contact your Recruiting Partner.

The base salary for this position ranges from \$43.13/hr up to \$72.02/hr. Salary is based on a number of factors and may vary depending on job-related knowledge, skills, and experience. Amazon is a total compensation company. Dependent on the position offered, equity, sign-on payments, and other forms of compensation may be provided as part of a total compensation package, in addition to a full range of medical, financial, and/or other benefits. Applicants should apply via our internal or external career site.

Job Requirements

BASIC QUALIFICATIONS

- Are enrolled in a academic program that is physically located in Canada
- Experience with at least one modern language such as Java, Python, C++, or C# including object-oriented design
- Currently enrolled in a Bachelors, Masters, or PhD program in Computer Science with an expected graduation date between 10/2025 - 9/2028

PREFERRED QUALIFICATIONS

- Knowledge of computer science fundamentals such as object-oriented design, operating systems, algorithms, data structures, and complexity analysis
- Internship, project, or academic experience in at least one of the areas: internals, kernel, OS/storage systems, job scheduling, resource management, file systems, search, or performance engineering

Citizenship Requirement N/A
