<b>Job Description</b>	

#### About Us

At Trulioo, we build and connect digital identity networks around the globe, and this framework of trust empowers businesses to assess the various risks associated with digital identities. Our mission is to build trust online. Digital services hold the promise of allowing anyone to interact and transact with anyone, anywhere. However, the threat of bad actors gets in the way of our connectedness; the global village only works if we trust each other.

We are a Silicon Valley-funded tech company solving the problems of trust and safety online. To realize that goal we've built the world's leading identity verification platform, enabling instant verification of 5 billion people and 250 million businesses in more than 100 countries. With offices in Vancouver, San Diego, Austin, and Dublin, we've fostered a world class team committed to building trust online. Our competitive advantage is, and always will be, our people. At Trulioo, we truly believe "everyone is someone" and we invite you to join our mission and celebrate the positive change we are making in the world.

#### Position Summary:

We are looking to grow our technical team and want to hire a goal oriented, high-energy, Junior Software Engineer co-op.

**What you'll be doing:**

- Work as part of a cross-functional feature team to deliver complete, high-quality, end-to-end solutions.
- Work collaboratively with Engineering and Product to expand stories into tasks, and work on removing impediments.
- Collaborate in meetings with Senior Engineers to integrate deliverables, optimize the automation processes, and plan future implementations.
- Based on user story acceptance criteria, work with the team to design a scalable, robust, and reusable solution to that story.
- Document and communicate designs to others on the team.
- Contribute to guidelines and coding standards used for building reusable application components that are easy to maintain, troubleshoot, and test.
- Participate in peer design and code reviews.
- Identify and assist in mitigating technical, schedule, and other project risks.
- Provide technical input into product road maps, negotiating compromises between business and technical constraints.
- Provide input into process improvement initiatives to improve quality and timeliness of deliverables with high predictability.

**Working at Trulioo**

You will be challenged to achieve, develop, and grow as part of a hyper-growth company.

We offer you the opportunity to make a difference and create a better world by revolutionizing how technology, trust, and identity intersect online. We are on a mission to make sure no one is left behind and everyone has the opportunity to participate fully in the modern digital economy. In order to do this well, diversity and inclusion have always been fundamental to our mission, our culture and our life. Trulioo is proud to be an equal opportunity employer and our commitment to inclusion across race, gender, age, religion, identity and experience connects us with the customers and communities we serve, attracting top talent and passionate changemakers across the globe. Our mission matters - for billions of people everywhere.

The diverse experiences, ideas, and identities of Trulioo's team members help us make better decisions and drive great results. We foster an inclusive work environment that welcomes team members of all backgrounds and perspectives.

We're committed to providing a meaningful environment for every member of our team. We hire exceptional people and reward them with trust, autonomy, mentorship, and the freedom to grow into their roles.

You are naturally curious, invest time to better understand complex concepts and have strong attention to detail. You love working in a team where trust is key and want to make an impact everyday. If this sounds like you, please apply and come work with us.

Thank you in advance for considering Trulioo. We appreciate your interest

**Job Requirements****You Have:**

- Pursuing a Bachelor's degree in Computer Science/Engineering or related field.
- Exposure to developing user interfaces, custom services, components, or modules using Microsoft stack.
- Familiarity with the .NET framework, ASP.NET MVC, Web API and C# or ReactJS and JavaScript.
- Exposure to database systems, MySQL, MS SQL Server. Knowledge of NoSQL databases an asset.
- Understanding of test-driven development and agile/iterative development methodologies.
- Able to learn quickly and effectively apply new knowledge, demonstrating the desire to stay in touch with emerging technologies.
- Strong analytical skills, problem-solving ability, and attention to detail.
- Excellent verbal and written communication skills are required. Very strong collaboration

skills and passion for work in a team environment with ability to resolve conflicts and align people.

**It's a bonus if you have...**

- Exposure to Entity Framework, LINQ to Entities, and Lambda Expressions.
